

**Conclusion:** Include answers to the following questions in your conclusion.

- Summarize the results of your experiment. Did the your results agree with your hypothesis?
- What type of respiration began to happen when your muscles started to run out of oxygen?
- Why did your muscles begin to hurt? What was being produced?
- How does the data and graph help support what happened when your muscles ran out of oxygen?
- What have you learned from this lab?
- What would you do differently if you did this lab again?
